# EXECUTIVE SUMMARY

ADG Annual Report 2021 is our second annual report and presents our activities from January 2021 to May 2022. It is comprised of discussions on projects, programmes and operations executed by our committees which are the Education and Training Committee, Electricity Committee, and Water Committee.

Our 2020 Annual report was presented in April 2021. There are some overlaps between the two annual reports. This is especially the case in the area of training where it is necessary to maintain continuity in monitoring the careers of youths who started their training programme in January 2021 and continued till September and October 2021. They are being trained in Batches 1 and 2, and Batch 1 crossed from the first annual report to the second.

Following this executive summary is a list of achievements within this reporting period. It is relevant to explain that there is a new group responsible for the operation of the Uda Oil Mill, in the Education and Training Committee. It is recorded as one of our achievements. Its historical backdrop is presented in the report.

The list of achievements provides the highlights of our activities. For detailed information, we have included separate reports from each of the three committees. As a result, if a reader is interested in following up on any of the achievements, it is convenient to scroll straight to the committee which recorded the achievement. This makes for flexibility for the reader to obtain in-depth information on any listed achievement. Further, please the reader is welcome to get in touch with any of the committee leaders to discuss any points for which more information is needed. Their contact information is included at the end of each committee report.

The report contains information on our financial transactions consisting of the contributions and expenditures. Dates are given when the payments were made, and to whom. The list of the contributors is also included. The summary of the contributions and expenditures for each committee is as follows:

Education and Training (Uda Enterprises): Contributions (income) N11,306,900.00; expenditures total to N10,273,800.00

Water Committee: (Contributions & loan): N7,103,300.00; expenditures: N5,691,950.00

Electricity Committee: (Contributions): \$3,100.00 and N1,110,000.00

Detailed financial information is presented in Amuvi Uda Corrected Accounts, an attached file. Lastly, we wish to thank every Amuvi person and congratulate you on the achievements here recorded. Without your material and moral support, we cannot record any success. Thank you for all you have done and for finding time to read through this report. We appreciate your partnership in our collective determination to give our level best in the development of our village for the welfare of everyone. Ndewo.

## LIST OF ACHIEVEMENTS

This list will consist of achievements from

1. The Education and Training Committee (UDA Entrepreneurship Scheme),
2. Electricity Committee and
3. Water Committee

### **01** Education & Training Committee (UDA Entrepreneurship Scheme) has achieved the following in its various programmes:

#### **1.1 Education and Training:**

Two batches of youths have been trained since January 2021 as follows:

##### **Batch 1**

- 40 youths trained on vocational training,
- 24 youths placed on one-year apprenticeship program and empower
- 11 skilled youths empowered to start entrepreneurship activities by ITF are yet to start business

##### **Batch 2**

- 13 ladies trained at the University of Nigeria, Nsukka, graduated in cosmetology, hair dressing, fashion design and tailoring;
- 5 boys in Enugu (location 1) graduated in building craftsmanship - plumbing and pipe fitting and masonry and
- 23 youths in Enugu (location 2) out of whom 12 graduated in farming (poultry and fishery), solar energy installation and catering/confectionary.
- 7 graduated in computer science (hardware and software) while out of the 2 that studied electrical installation, one failed final assessment while one abandoned the scheme.

Most of the successful trainees (pictures insert) have moved into the 3rd phase of the scheme, that is; apprenticeship or attachment and it shall last for one year.

#### **Funding:**

During the review period, total expenditure of N8,308,400.00 (eight million, three hundred and eight thousand and four hundred Naira) on entrepreneurship out of which ITF defrayed N750,000.00 (seven hundred and fifty thousand Naira)

One of the peculiarities of our Uda Enterprises Program is that we go into partnership with government organizations such as the Industrial Training Fund (ITF). It has done the following for our trainees:

- Paid tuition for some trainees
- Equipped them with starter-packs and tools they require to launch themselves into entrepreneurial activities.
- Bought farming (fishing and poultry) and catering tool kits respectively for them.

**Annexure 1, in spreadsheet**, provides details of all the trainees in Batch 2, including names, skill areas, master craftsmen currently training them, locations, expenses incurred.

#### **Uda Entrepreneurship Scheme permanent site:**

- The scheme now has a permanent site consisting of a 4.5 plots of land donated by the late Dr Nwakanma Okoro's family
- The objective is to develop on the land micro businesses to enhance learning and provide job opportunities for trainees and other locals.
- From the family's point of view, the land is to be used to immortalize their father for his services to the community.

#### **US Ambassador's Grant of \$10,000.00**

AWU-ADG, in collaboration with Iyom Amuvi under the aegis of Onyemaranwanneya, applied and won the United States of America Ambassador's Special Self-Help Program grant

in Nigeria for fiscal 2021 worth about \$10,000.

The objectives of the grant are:

- to boost skill acquisition scheme by developing the capacity of local entrepreneurs in the oil palm value chain
- to improve the production and processing of oil palm products,
- to improve livelihoods along the chain and
- to create wealth in the community.

### Uda Palm Oil Processing Mill

- With counterpart funds from AWU-ADG, a complete set of palm oil milling machines has been procured and installed (see pictures insert) and key staff sourced.
- An arrangement with rural women under Uda-Amuvi Multipurpose Cooperative Society Ltd has been worked out for its take-off.
- It is estimated that in the immediate to short term future, about 50 people from the community shall be direct beneficiaries, with women accounting for 70 percent, with 250 indirect beneficiaries.
- The mill is planned to be operational from the first week of June 2022.
- Members of its management team are:
- The Secretary of Onyemaranwanneya/ADG (Mrs Uju ND-Ezuma),
- ADG Financial Secretary (Mrs Ijeoma Okoronkwo),
- An external Consultant, Nwa-Mazi Achinivu Okorafor (General Manager)
- Mazi Chima Amara (Supervisor),
- Romanus Okoronkwo (Oil Mill Officer) and
- Dr Azubike Okoro (Chair, ADG Education & Training Project).

Note that the sum of N5,165,780.00 (five million, one hundred and sixty five thousand and seven hundred and eighty naira) has been expended on

the mill. Please check the attached sheet, Annexure 1 – Annual Report

### 02 Electricity Committee

Following the efforts of Dr. Ukoha and Mazi Engr. Onyeka Uwah, in September 2021, the EEDC removed the three faulty transformers from Amuvi and transported them to Enugu for evaluation and repair.

- In December 2021, one of the transformers was repaired, returned and installed at the Ogo Amuvi.
- On March 23, 2022, the returned transformer at Ogo Amuvi was energized but not loaded.
- On May 2nd, it was found that because of faults in the lines, its voltages were low.
- From May 2nd and 4th, the faults were cleared so that voltages in the system now read correctly.
- We are thankful to Engr Onyeka Uwah and his team for this achievement.

### 03 Water Committee

- We carried out the repair, removal of rust on the water filter and raw water tank,
- Roofing the filter and the raw water tank was carried out and some work done on the main tank between March to May 2021 (for six weeks) Costs of 1 & 2: (N1,914,700).
- Procurement and installation of team two (2) new Solar submersible Grundfos pumps, completed on May 10, 2021, at the price of N1,532,400).
- Procurement and installation of flanges to fix a damaged joint on an outlet pipe of the main tank was carried out.
- Also, five new taps were installed at the well area. Flanges and taps were procured at a cost of N267,350.00. The job duration was

- one week within the second week of July 2021.
- Work on the main water tank consisting of fixing the identified leaks, scraping of rust, painting the panel, tasks completed on 31st October 2021 at a total cost of N758,000,
- The repair of the damaged portions of wall surrounding the well head area was done at the cost of N394,800.00
- The flooring was done by means of covering the ground with 12 trips of sand, gravel and a bag of cement. The total cost is N350,000.00

## MAIN REPORTS

### EDUCATION & TRAINING COMMITTEE REPORT

#### Introduction

In pursuance of its mandate of building the capacity of Amuvi youths on vocational skills and entrepreneurship, the scheme's 2021 strategic plan focused on achieving three specific objectives:

- to graduate 40 youths on vocational training,
- to place 40 youths on one-year apprenticeship program and
- to empower 10 skilled youths to start entrepreneurship activities.

The first two objectives were achieved at 100% and 70% respectively, while the third recorded about 20% success. The scheme primarily aims to equip the young ones with skills for productive activities, thus reduce poverty and vices and improve quality of life in the community. It has four stages: value reorientation, vocational training, apprenticeship, and empowerment, with monitoring and evaluation infused in each stage.

The 2020 annual report gave details about the inauguration of the project group on Saturday October 3, 2020, and launch of the scheme with value reorientation and empowerment of youths

in Batch 1 in January 2021. The ten (10) empowered youths are currently practising their trades in and around Arochukwu. The current report focuses on the activities of youths in Batch 2. The summary of funds generated and expended during the review period is provided in the appendix.

#### 2021 Activities Batch 2

Batch 2 comprises 41 youths:

- 13 ladies that trained at the University of Nigeria, Nsukka and graduated in cosmetology, hair dressing, fashion design and tailoring;
- 5 boys in Enugu (location 1) that graduated in building craftsmanship – plumbing and pipe fitting and masonry and
- 23 youths in Enugu (location 2) out of whom 12 graduated in farming (poultry and fishery), solar energy installation and catering/confectionary. Also, 7 graduated in computer science (hardware and software) while out of the 2 that studied electrical installation, one failed final assessment while one abandoned the scheme.

Most of the successful trainees (pictures insert) have moved into the 3rd phase of the scheme, i.e., apprenticeship or attachment and it shall last for one year. This phase is critical because it assists the new artisans to put into practice what they learnt during training, including rudiments of shop and client management, thus setting them up to succeed in their own businesses. At completion, the successful ones shall be mobilized/empowered to start their own businesses.

- Annexure 1 provides details of all the

trainees in Batch 2, including names, skill areas, master craftsmen currently training them, locations, expenses incurred, etc. We made payments for those who secured trainers while some are yet to secure appropriate apprenticeship master craftsmen and locations. It is obvious that they would finish at different times, which is good as it allows ADG time to plan for their empowerment in batches to start their own businesses which is the 4th and final stage of the scheme.

**Amuvi Youths graduated from their courses, proudly displaying their certificates**

**Young men just graduated from their building craftsmanship courses**

**Amuvi ladies rejoicing having achieved success in their courses**

**Leaders and a graduate student exchanging pleasantries**

**A group of Amuvi students with their leaders**

## Uda Palm Oil Processing Mill

Sequel to plans to make Uda Entrepreneurship Scheme a permanent institution and a model skills development framework coupled with the need for micro businesses to enhance learning and provide job opportunities for trainees and other locals, AWU/ADG got late Dr Nwakanma Okoro family to donate 4.5 plots of land for a permanent structure for the scheme and to immortalize their father for his services to the community.

The centre would host small-scale factories that would enhance trainee's practical learning and provide job opportunities for the locals. To realize this objective, AWU-ADG, in collaboration with iyom Amuvi under the aegis of Onyemaranwanneya, applied and won the United States of America Ambassador's Special Self-Help Program grant in Nigeria for fiscal 2021 worth about \$10,000. The grant target is to boost the skill acquisition scheme by developing the capacity of local entrepreneurs in the oil palm value chain with a view to improving the production and processing of oil palm products, improve livelihoods along the chain and create wealth in the community. With counterpart funds provided by AWU-ADG, a complete set of palm oil milling machines were procured and installed (see pictures insert) and key staff sourced. Also, a pilot arrangement with rural women under Uda-Amuvi Multipurpose Cooperative Society Ltd was worked out for its take-off.

AWU/ADG believes that that small-scale agro-processing holds the key to rural poverty reduction and the ubiquitous oil palm tree provides the pathway for stimulating local economic development. It is therefore, estimated that in the immediate -to-short term future about 50 people from the community shall be direct

beneficiaries, with women accounting for 70 percent, with 250 indirect beneficiaries. The mill was billed to be operational by Easter, but the target was missed. The 1st week in June is the next target and AWU-ADG has constituted the following management team to oversee its operations:

- Secretary of Onyemaranwanneya/ ADG (Mrs Uju ND-Ezuma),
- ADG Financial Secretary (Mrs Ijeoma Okoronkwo),
- an external Consultant, Nwa-Mazi Achinivu Okorafor (General Manager)
- Mazi Chima Amara (Supervisor),
- Romanus Okoronkwo (Oil Mill Officer) and
- Dr Azubike Okoro (Chair, ADG Education & Training Project).

Micro businesses (venture capital formation – e.g., mills for palm oil, plantain, yam, etc) are part of the scheme's sustainability plan, alongside government agencies intervention by the Industrial Training Fund (ITF), National Directorate of Employment (NDE), etc. Other sources include train-the-trainer scheme (social reproductivity of labour), donations and benefactors (grants) and loans and trust funds (rural financing schemes). The statement of account which shows sources and application of fund for the activities at the oil mill is attached.

**Oil palm processing equipment**

**Miscellaneous items of equipment at the oil palm processing mill**

### **Empowerment of Trainees by ITF**

A peculiar feature of the Uda Entrepreneurship Scheme framework is the strategic collaboration and partnership with major government vocational development agencies which guarantees its resilience, effectiveness and the robustness of its deliverables. One of the agencies, the Industrial Training Fund (ITF) not only paid tuition for some trainees but has also

started equipping them with starter-parks and tools which they require to launch themselves into entrepreneurial activities. Trainees of farming (fishing and poultry) and catering were empowered recently with tool kits for their vocation, and more are scheduled to be similarly empowered. Some of the trainees and their equipment are shown in the pictures below.

**An empowered ITF trained youth with their equipment**

**Items of equipment for the empowered trained youths**

**Another item of equipment for our ITF empowered youths**

### **Uda Micro Credit Scheme for Cooperatives**

Another arm of the Training and Education Project is the trust fund (Cooperative Loan Scheme) that is charged with the following responsibilities:

- Evolving modalities for sustainable administration of soft loan to qualified persons,
- Campaigning for donations to grow the fund and serving as its custodian,
- Advising on investment and management of the fund,
- Developing schedule and governance standards for efficient loan administration and sanctions for defaulters, amongst other roles.

Since the inception of the entrepreneurship scheme, not much progress was recorded on it due to lack of appropriate leadership at the sub-

team. Most people reached out to, including ADG members, were neither willing to provide the required seed funds nor to guarantee loan for its take-off. However, given the proven effectiveness of the scheme in alleviating rural poverty, during the period under review, the President-General, Mazi Ikechukwu Okafor, coordinated a fund-raising for the project. He personally guaranteed it and 1.5 million Naira was contributed and disbursed to Uda-Amuvi Cooperative Society Ltd which it lent to its members for 'mgbamiri' and related micro business ventures. The group has written a progress report and indicated willingness to commence repayment in line with the agreed terms and conditions. We shall review the success after the tenor of the soft loan scheme and take further action to strengthen its operation if it proves beneficial to the community.

## Conclusion

The Uda Entrepreneurship Scheme has made substantial progress in the one and half years of its existence. However, a major challenge remains funding and the scheme may suffer setbacks unless timely assistance is secured. In fact, we are unable to avail the tuition-free training allotted to us by ITF this month due to lack of funds. Many youths who are yet to join the scheme are asking to do so daily while for those enrolled, we need to pay the master craftsmen where the trainees are undergoing on-the-job training and pay the trainees stipend to cover feeding and transport. This is aside from the money required to empower them post-training as well as start operations at the oil mill and sustain the soft loan scheme for the cooperative group. We have been

running the program on the steam of donors and sponsors and many see it as the best way to invest in our youths who shall become the pillars of the community tomorrow. So, we invite sons and daughters of Amuvi, including previous donors, to come to our assistance. No amount is too little please. Send donations to ADG account: **Union Bank, Acct 0151698775** and tag it Amuvi Youth Empowerment Scheme.

## **ELECTRICITY COMMITTEE REPORT**

In our 2020 project report, the Electricity Committee (EC) informed Amuvians` that the committee was working on efforts to tackle the electricity challenges in the village. In that report, the EC indicated that its studies were ongoing and promised to publicize the plans once the committee was convinced the plans could be implemented economically to contribute to solving our electricity problems in the village. Since the 2020 report, there have been some developments in the work of the committee. The EC communicated those developments to Amuvians via the various Amuvi WhatsApp platforms. We will summarize the highlights in this report.

You may recall that there are five 300KVA, 33/0.415kV distribution transformer substations that serve Amuvi. These transformers are located at:

1. Ogo Amuvi (by Mgballa ekpe),
2. Agbata Uzo (opposite Dede Ezekiel's),
3. Uzo Oil Mill (by Nnanna Ngwu's),
4. Opotopo (by Paul Nwokoro's), and
5. Uzo Oil Mill (opposite cottage hospital).
- 6.

Unfortunately, the first three transformers in the list have failed. Thus, the EC's initial effort was to

assess the feasibility of repairing or replacing the transformers.

### **Removal and Repair of Transformers by EEDC**

The EC reached out to Dr. Michael Ukoha, the Arochukwu representative in the Abia state legislature. Dr. Ukoha contacted the Enugu Electricity Distribution Company (EEDC) for assistance. In addition, the EC engaged Mazi Engr Onyeka Uwah, our Subject Matter Expert (SME), to utilize some of his contacts within the EEDC and the electricity industry in Nigeria. In September 2021, those efforts materialized when the EEDC removed the three faulty transformers and transported them to Enugu for evaluation and repair.

As of December 2021, one of the three transformers was repaired and delivered to Amuvi. Over the Christmas holidays, several members of the EC who travelled to Arochukwu took time to visit the transformer sites and gained a better understanding of the status of the remaining transformers. The members were also briefed on the needed operating accessories necessary to put a transformer back into service.

## Status of the Repaired Transformer

It is important to note that returning a transformer to service is a complex task that requires special skill. Ordinarily, it would be the responsibility of the EEDC to restore the transformer to service. However, things don't always work out as easily as one would expect. In any event, with the assistance of Engr. Onyeka Uwah, the restoration to service of the repaired transformer has been completed. We wish to highlight some major milestones and issues attended to in the process of completing all tasks related to bringing the repaired transformer to service.

**1) March 23, 2022:** The returned transformer at Ogo Amuvi was energized but not put on load. This is the usual practice, allowing time for the transformer to stabilize on voltage. This process was further delayed due to:

- The technical team responsible for such high-level jobs come from Umuahia and are not readily available as their services were also needed in other places, and
- The frequent incidents of faults along the major transmission line from Itu adds to the delay as the transformer can only be energized and loaded when there is a power supply.

**2) April 27, 2022:** The transformer at Ogo was placed on load after the distribution networks between Ogo and Opotopo were separated close to Mazi Innocent Abah's shopping/business centre.

Previously, people from Ogo were receiving power from the transformer at Opotopo after their transformer failed. With the reinstallation of the Ogo transformer, the distribution line

connecting Ogo and Opotopo is no longer needed since Ogo and Opotopo have separate transformers.

Recall that the transformer at Opotopo is one of the two transformers that have been operational. After the separation, it was observed that while the voltages at Ogo transformer were good, the three phases for the only outgoing feeder couldn't be fused as there were several line faults. Thus, only two of the phases were put to use. Remarkably, folks living in the Ogo Amuvi area were able to use electricity to power everything in their houses. The voltage supplied to homes in Ogo was 233 volts as against 115 volts received when they were connected to the transformer at Opotopo.

Again, persistent faults on the major transmission line (33kV feeder) from Itu have not allowed for the full testing of the transformer on load.

**3) May 2, 2022:** The team engaged in tracing and removing faults on the local line sections connected to the transformer at Ogo Amuvi. All three phases of the transformer functionality were successfully restored. However, this restored state has yet to be tested given lack of steady power supply from the fault prone 33KV transmission feeder lines from Itu.

**4) May 4, 2022:** When the 33 KV supply was restored from Itu, (the feeder became functional), and the lines were fully tested; the three phases were fully returned to service.

The pictures that follow were captured at various stages of the reinstallation process of the repaired transformer.

Figure 1: Repaired Transformer

Figure 2: 33kV Bushing of Transformer

**Figure 1 shows the picture of the repaired transformer sitting on its base at Ogo on the day it was returned. Figure 2 highlights the 33 kV bushings of the transformer during the reinstallation process.**

Figure 3: 33kV Gang Isolator of Transformer

Figure 4: Upriser Cable from Feeder Pillar

**Figure 3 shows a 33kV gang Isolator and drop off fuse set while Figure 4 is the picture of an Upriser Cable from the feeder pillar.**

Figure 5: 415V Bushings and Cables of Transformer

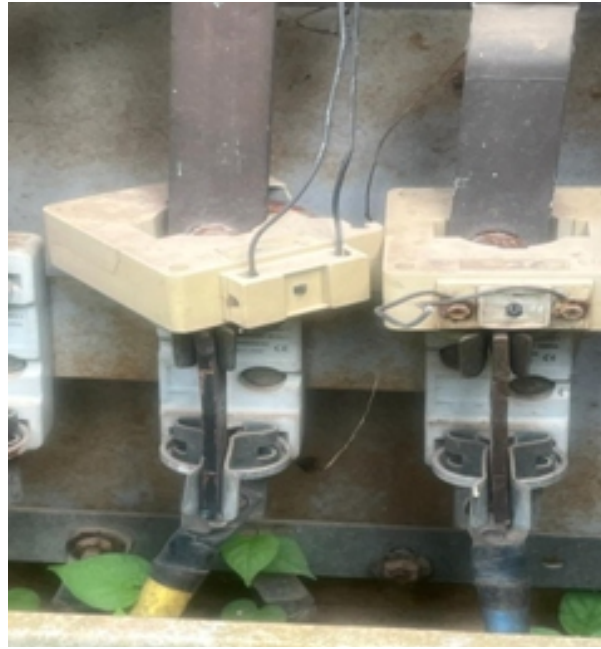

Figure 6: Bush Bars of Feeder Pillar

Figure 5 is the picture of a transformer showing the 415 volts bushings and cables. Figure 6 is the picture of a feeder pillar showing the bus bars.

Figure 7: Feeder Bays of Feeder Pillar

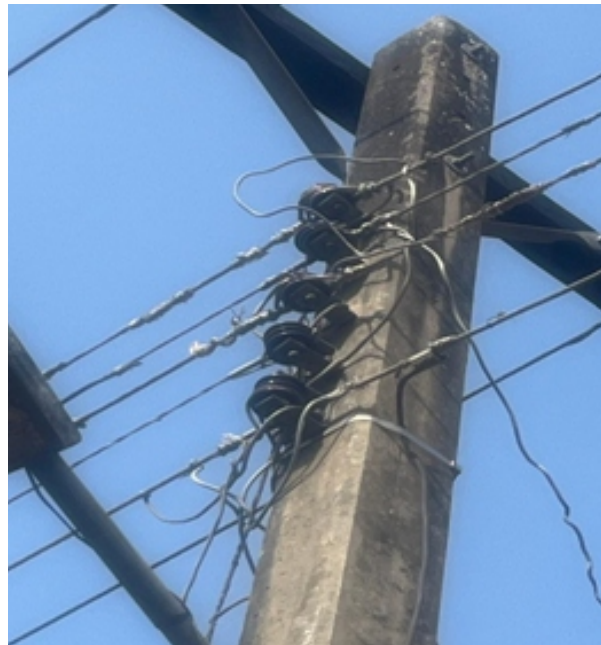

Figure 8: Separation Point of Ogo and Opotopo Transformers

Figure 7 is also a feeder pillar but in this picture the outgoing feeder bays are shown. Figure 8 shows the point of separation between the Ogo and Opotopo transformers. Recall that when the Ogo transformer was out of service, the Opotopo transformer was also servicing the Ogo area of Amuvi.

## Next Steps

### 1) Harmonizing The Functional Transformers

With the repaired Ogo transformer functioning properly, we now have three transformers in our distribution system for Amuvi. These three transformers should be able to provide fairly good quality power to most parts of Amuvi with the exception of the Harpel area. The quality of power supply will further improve if the faults on the network feed by the other two transformers are cleared. Engr. Onyeka Uwah and his team will channel efforts towards this end with the distribution company.

### 2) The Two Remaining Un-repaired

#### Transformers

Engr. Onyeka Uwah discussed this with the Chief Operating Officer (COO) of Enugu distribution company, before Easter. While the COO still promised to repair or replace them, he didn't give any specific timeframe for this action. He said 33kV transformers aren't easy to come by and if it were an 11kV transformer, he would have provided it right away. Engr. Uwah plans to keep on reminding him about it.

#### Funding

As at this point, availability of funds has not been a primary concern. As soon as a repaired transformer was returned, members of the ADG and a few other Amuvians made some initial donations to kick off the installation process. The

committee made the strategic decision to delay a wider fund-raising effort until the single returned transformer is completely back into service. The EC intends to restart the fund-raising efforts shortly in readiness for the work necessary to restore and put the rest of the transformers into service.

At this point, the total amount raised is as follows:

- \$3,100: three thousand one hundred US dollars
- N1,110,000: One million one hundred ten thousand Nigerian naira

Please note that the ADG operates both a naira and US dollar bank accounts in Nigeria.

#### Looking Ahead

Given the progress made in putting back the repaired transformer to service, the EC is now in a position to embark on more aggressive efforts to raise funds for the repair of the two remaining transformers, ongoing maintenance and improvement of the three substations currently in use, and the possible purchase of a new transformer.

## WATER PROJECT REPORT

We completed the major task of stopping the backflow that caused incessant environmental damage, and other tasks associated with it in December 2020. For those tasks, we spent over N1.2 million.

From the beginning of the year, we identified the

outstanding tasks in the water network as follows:

- Complete the servicing, repairs, painting and rehabilitation of the raw water tank, the filtration system; and the main water tank,
- The procurement of two Grundfos solar

water pumps to replace the two identified bad pumps.

- Repair of the broken portions of the wall around the wells, the filtration plant and the main tank.
- Flooring of the ground of the well area
- The distribution of piped water in the village to homes or as close to homes as possible. This is the third phase and it will be capital intensive. A team of our engineers are working on the design to find a cost-effective approach for implementing the water distribution and raising the required funds.

The tasks completed within this reporting period include the following:

- Mazi Angus Okoro and his team worked on the repair, removal of the rust on the water filter and raw water tank, roofing the filter and the raw water tank, etc. Following his death on May 12, 2021, which was sad and most unexpected, every aspect of the work was suspended. Before then, they had worked for six weeks. The cost was one million, nine hundred and fourteen thousand and seven hundred Naira (N1,914,700).

**The roofed filtration unit**

- We later engaged Mazi Engr. Chima Aloma Okereke and his team to work on the main tank. Before then, two new pumps were installed.

### **Installation of two new pumps.**

As contracted by us, Mazi Chima Aloma Okereke and his team procured and installed two (2) Solar submersible Grundfos pump. We remain thankful to him for the financial discount of fifty percent (50%) he gave to Amuvi on the old, lower, pre-inflation price. The cost of procurement, delivery and installation of two Grundfos pumps was one million, five hundred and thirty-two thousand and four hundred Naira (N1,532,400). Moreover, the pumps reportedly, have a higher flow rate and therefore costlier than the original pumps. They were tested and handed over to us on Monday, May 10th., and he was paid fully. We also received a soft copy manual for the pumps.

#### **1. Work on, and around, the Main Water tank**

- For a start, we acknowledge with thanks the contribution of Mazi Charles Ijeoma who provided his assembled scaffolding equipment by the water tank from June 30th for more than thirty days for our use.
- There was a problem on the outlet of the water tank as the outlet pipe broke off because it was poorly connected to the tank by the original contractors who supplied and installed it. The pipe was reportedly tied to the tank stanchion (stand) with a metal rope. We bought and fitted flanges to install the pipe at the outlet.
- Five new taps were also installed outside the well area to serve our people.
- The cost of the flanges, the taps and their installation was N267,350.00. The job duration was one week within the second week of July.
- Within the last fortnight of October, the Mazi Chima Aloma team inspected the water tank

to identify the leaks and went on to fix them. They scraped the rust, fixed the identified leaks and painted the panels as shown in the pictures below. They completed the assignment on 31st October at a total cost of N758,000, which was also paid. There is a warranty of 18 months on the job done on the tank.

**Dismantled main water tank**

**Rust removed from inside the main water tank**

**Tins of rust-proofing paints used in the water tank**

**Painting the interior of the main water tank**

**Assembling the main water tank**

As we moved to the end of the year 2021, the outstanding tasks in the water network were as follows:

- Repair of the broken portions of the wall.
- Flooring of the ground of the well head area
- The distribution of piped water in the village to homes or as close to homes as possible.

### **Repair of the broken Wall and Flooring the Well area with Laterites**

We advertised on Amuvi WhatsApp platforms and received quotations from three Amuvi contractors. We also received a quotation to guide us from our trusted and competent civil engineer, UgwuAro Engr. Goddy Ijeoma.

Please find below two statements that summarise the quotations received from each of the three bidders, as discussed below:

- The quotations for the flooring were between N1.49 million and N10 million

- For repair of the wall, they were between N500,000 and N2 million

Realising that we do not have such funds, we wanted to shelve the tasks in order to focus on water distribution. However, the PG, Mazi Ikechukwu Okafor, suggested that we could use direct labour to solve the two problems. This was approved.

- The repair of the wall has been done with the sum of N394,800.00
- The flooring was done by means of covering the ground with 12 trips of laterites. The total cost is N350,000.00
- These two completed tasks saved us some millions of Naira since we avoided the market prices as given by the contractors. Pictures of the covered ground and the repaired wall respectively are given below:

**The ground of the well area now covered with laterites**

**A part of the repaired wall around the well area**

These two assignments were carried out in the last week of April and first week of May 2022.

### Going Forward

The outstanding major assignment in the water project is the water distribution in the village which is Phase 3 of the water project. This is capital intensive because it will involve laying new water pipes all over the village. Feasibility study is being carried out by suitably qualified Amuvi persons. Suggestions are welcome to enable our team to choose the most cost-effective approach for the village.

## CONCLUSION

At this end of the month of May 2022, the Amuvi Development Group is still under two years in existence but we have reasons to be thankful for the achievements that have been made as the ADG Management Team of AWU continued working with our good people of Amuvi both at

home and in diaspora. It is certainly the case that as a community we have been constrained to take up responsibilities which the government, and not the village, should shoulder.

We in Amuvi, led by the PG AWU, Mazi

Ikechukwu Okafor and his team, by the formation of the ADG, have demonstrated, in no uncertain terms, that we will neither abandon our people at home, nor surrender the development of our human capital, specifically our youths, nor capitulate to the damaging and destructive consequences of failed infrastructure. We have no other choice than to invest our human and material resources in continuing efforts to solve these problems, not only to ensure our survival but also, to enhance our welfare and facilitate our socio-economic development.

Within this reporting period, we rejoice that forty one of our youths have completed their training and are in the second phase where they are acquiring hands-on skills such as fashion design, cosmetology, dress making and hair dressing for ladies. Information Technology, plumbing and pipe-fitting, farming such as fish farming, poultry, etc., are for the young men.

We rejoice with our youths who are being trained and guided to become responsible self-employed trades men and women. We are effectively building a group of enterprising persons who will work for the comprehensive development of our village and make it the choice place to visit in the near future, especially by our people in diaspora.

The credit for this goes to everyone who has volunteered and invested on a youth. Each of you deserves a pat on the back. Thank you. "Well begun is half the job," as the saying goes. We wish to appeal that there is still more work to be done. Youths that have not been trained are queuing up and knocking on our door for their turn.

We cannot turn them back because they are keen.

Whilst we are short of fund as ADG, having invested N10.27 million out of N11.31 million collected on training, we know that our responsible people of Amuvi are interested in the continuing development of our youths.

Our water project has moved from the days in which Amuvi was experiencing nonstop, 24x7x52 damaging overflow which was continuously degrading our environment especially around the well area, the adjoining roads and surrounding houses, to these days where everywhere is dry and well maintained. Even the overgrowing grass has been kept under check. The last phase of our project is to distribute the water from the Amuvi tank to the whole of the village. This is a multi-million naira project for which our engineers are studying to determine the cost-effective way forward. We shall all be involved in its funding because we all need to distribute the water from the tank with reliable, durable and sustainable pipes.

Our electricity committee is equally working hard. A repaired transformer has been delivered and powered and has improved the quality of the power supply around the Ogo Amuvi area where it is installed and supplying. The committee members are still working on the repairs and return of the remaining two transformers still with the EEDC. Moreover, they are planning for the overall enhancement of the power supply in Amuvi in the short -to-medium term.

None of these projections can be achieved without the cooperation of every Amuvi person. We salute your dogged determination to continue to support ADG projects until success is achieved on all fronts.

Please make your contributions directly to the ADG Union Bank account, with the account information repeated here:

Amuvi Welfare Union Amuvi Development Management Team,

**Union Bank**, Account Number: **0151698775**

(for Naira payment).

For payment in foreign currency, (Domiciliary Account) :

**Union Bank**: Account Number: **0171981363**

Please state which committee, whether Education & Training, or Electricity, or Water, for which your payment is being made. For accountability and transparency purposes, please pay only to the above-named account and not to any committee.

We cannot thank you sufficiently for your laudable efforts to work with our committees and indeed other committees of Amuvi with the singular goal of achieving the socio-economic development, and the good health and welfare of every person at Amuvi. Thank you.
